## Welcome To OceanSolution™

*Replace all fertilizers from seed to full growth for  
less than \$7.00 an acre!!*

OceanSolution™ is a concentrated liquid solution that provides **essential nutrients** from the deep ocean for healthy seed and **plant growth** – perfect for farms, orchards, pastures, hydroponics and home gardens. The following benefits of using sea solids have been summarized by Dr. Maynard Murray in his groundbreaking work *Sea Energy Agriculture*:

- **Tomatoes contain approximately 56 minerals** while conventionally grown tomatoes contain less than 20 minerals.
- The need for dangerous and costly pesticide is reduced due to a stronger plant immune system and enhanced disease resistance.
- Open-pollinating **seeds do not require additional fertilizers** or nutrient supplementation.
- Demonstrated ability to rehabilitate diseased or under-performing orchards and pastures.
- **Enhanced nutritional content** and **extended shelf life of crops** when compared to those grown with conventional fertilizers.

Unlike conventional dry fertilizers, OceanSolution™ contains aerobic bacteria considered by many to be essential for healthy plants and soil. And according to consumer tests, OceanGrown™ produce tastes better than conventionally grown produce.
